MICRO DATA Cabinet
Specialized protection for computer media

When your
valuables need
to be Guarded well,
Think of, Guardwel.

Computers have today become a necessity in every field. Important data is downloaded & stored from computers onto electronic media like CD, floppies etc. Naturally, careful storage of these media is of prime importance.

These media, if exposed to dust, high humidity or fire can result in loss of data. For example a temperature of 55°C or high humidity levels can destroy the entire data on the magnetic/electronic media. Fire, as all of us know, can swallow anything in this world, and any ordinary fire resisting cabinet is not a solution when the data stored can be a matter of life & death for an organisation.

Hence to be sure and secure all the time, only Guardwel cabinets can effectively insulate the media within it from fire, heat, humidity. Guardwel cabinets are just the best choice. They are designed by technician trained in UK. Not just the performance, Guardwel cabinets also have a finish that can adorn modern offices.

Higher degree of protection

A high level of fire protection is provided through multiple layers of special barrier materials encased in the tough steel cabinet body. The entry of heat and vapour is inhibited by sophisticated sealing techniques.

The body and door closures have thermal breaks in their construction which help in stopping heat and moisture and take care of expansion of the cabinet body in intense fires.

Shock resistant

Locking and latching mechanisms give further rigidity and stability to the cabinet body. A reinforced support welded to the base gives the cabinet additional shock resistant ability. This is important in devastating fires which accompanies falling debris too.

User-friendly

Guardwel cabinet has a neat sleek body, immaculately finished to complement any office environment. The tray facilitates easy access to help find contents which may be at the far end of the safe. The interior is spacious and allows the user to store 540 floppy disks or 400 compact disks without the cover. The door swings easily and smoothly facilitating access. Additional drawer can be provided at extra cost.

Technical Specifications

Dimensions of Micro Data Cabinet

	External	Internal
Height	710mm	380mm
Width	560mm	280mm
Depth	750mm	507mm

Weight (approx) : 165 Kg. Internal Volume : 0.054 m³

In our quest for development, we reserve the right to alter any part of specification outlined without incurring any obligation.

Notes :

Bolted Lock

Floppy Disk Tray

Compact Disk Tray

Door with inter-locking grooves
